

Turf Maintenance Services

Fall Season 2012

Lake Region Golf Club is proud to begin offering various lawn care services to our Northbay friends and neighbors. Let us save you time and money while improving the condition and appearance of your lawn.

Lawn Aeration = \$45.00

Solid tine and/or core aeration is the single best thing you can do for your lawn. Aerating to a depth of 4 to 6 inches provides the following benefits to your turf:

1. Relieves soil compaction and "hardpan" in the grass root zone.
2. Allows oxygen and nutrients to penetrate the root zone.
3. Improves percolation - water penetrating into the soil
4. Promotes deeper root growth resulting in a healthier plant.

We utilize a solid shatter tine machine so there are no cores to pick up.

Weed Spraying = \$30.00

Application of 2-4-D in combination with Spectrum herbicide to control broadleaf plants & thistle. Chemical will be applied on a still day after a light frost to enhance the thistle weeds taking the treatment deep into their root zone. Spectrum will provide control of a wide range of perennial and annual broad leaf plants. Upon drying treated areas are safe to people and animals.

Fall Fertilizing = \$35.00

Fall fertilization helps turf recover from summer stress and allows roots to store nutrients for early spring green up and the beginning of active growth. LRGC utilizes a slow release granular nitrogen based product containing 1% iron to enhance sub soil root development. Applications will be completed during October.

Please call the Pro Shop at 605-983-5437 or drop off this slip to schedule lawn services.
